

Introducing MNP's Ag Risk Management Projector™

With multiple risks to consider and various insurance programs to cover them, it can be a challenge to determine the best course of action for your farm's annual insurance risk management strategy.

The Ag Risk Management Projector™ (ARMP) is an interactive tool which gives producers a better understanding of the costs and benefits of the various insurance risk management programs and how they can be tailored to work specifically for your farming operation.

1. Provides peace of mind and the ability to plan by updating your status in real time throughout the growing season and assessing the damage after major weather events.
2. Helps lenders better understand how your debt service will be affected by income loss.
3. Identifies your financial risk of loss.
4. Allows you to analyze crop rotation and how it impacts profitability — as well as risk.
5. Helps you with choosing the most appropriate insurance programs based on your risk tolerance.
